Doctoral consortium

The **International Conference on Open Source Systems (OSS)** is the premier conference to present research results related to open source initiatives, extending beyond software to include open innovation, open access, open data, open standards, open education, open science, open cloud, open artworks and museum exhibits, open hardware, open government and more.

The goal of the Eighth International Conference on Open Source Systems, **OSS 2012**, the first to be held in Africa, is to provide an international forum where a diverse community of professionals from academia, industry and public sector, and diverse OSS initiatives can come together to share research findings and practical experiences.
